D-SIMSPAIR powered by OAG data

D-SIMLAB signs licensing agreement with Official Airline Guide (OAG)

D-SIMLAB Technologies' flagship product D-SIMSPAIR will now ship with the latest flight data from Official Airline Guide (OAG). OAG (www.oagcorporate.com) is a global flight information and data solutions company for the passenger aviation, air cargo logistics and business travel markets.

Mario Hardy, Vice President Asia Pacific of OAG added, "In the past year OAG has expanded its presence in the MRO sector. It has established a number of partnerships in the aerospace and MRO market to meet the growing demand for innovation, efficiency improvement and better management of cost. OAG has been at the centre of the aviation industry for almost 80 years and we are pleased to be associated with an innovative company such as D-SIMLAB Technologies by providing flight information from our renowned global schedules database."

"By engaging OAG to provide up-to-date data for D-SIMSPAIR, D-SIMLAB offers an enhanced value proposition to our customers. Not only can the optimal spare component levels be determined more accurately, the associated logistics and risk mitigation policies can also be tested, improved and implemented. Further, all this can be done taking into account the latest

state of the flight network.” commented Dr. Nirupam Julka, Vice President Aerospace of D-SIMLAB Technologies.

D-SIMSPAIR is novel simulation-based, grid-enabled decision-support software that can be used to regularly re-optimize the spare parts inventory allocation and the logistics policies within a continuously evolving aircraft network. D-SIMSPAIR enables component service providers guarantee just-in-time availability of spares not only at the airlines’ home airports but also at all their overseas destinations. The OAG data will be used by D-SIMSPAIR to simulate the associated logistics network for spare parts delivery and repair cycles.

###

About D-SIMLAB Technologies Pte Ltd

D-SIMLAB Technologies is a leading provider of high-performance, simulation-based decision-support solutions for high value asset management in aerospace, semiconductor manufacturing, and container terminal operations. Established in 2006 and incubated at Exploit Technologies, it is a spin-off company from Singapore Institute of Manufacturing Technology founded by Peter Lendermann, Gan Boon Ping and Nirupam Julka. D-SIMLAB’s present shareholders include Exploit Technologies Investments and Imprimatur Capital, UK.

About OAG (Official Airline Guide)

OAG (www.oagcorporate.com) is a global flight information and data solutions company for the passenger aviation, air cargo logistics and business travel markets. The business is underpinned by its data management expertise. OAG holds a breadth of aviation and travel related content and is best known for its airline schedules database. This feeds the world's global distribution systems and travel portals, and drives the internal systems of many airlines, air traffic control systems, aircraft manufacturers, airport planners and government agencies.

OAG is part of Commonwealth Business Media (www.cbizmedia.com) a wholly owned subsidiary of United Business Media plc (www.unitedbusinessmedia.com).
